

Understanding Your Technology Risk

Marsh's Technology Risk Discovery tool provides a high-level understanding of the risks and exposures an organization might face from the use of technology in its business operations, or the incorporation of technology in its products and services. The tool ranks risks across a range of change to a range of technology-related exposures, including privacy breach, cyber extortion, data asset loss, business interruption and contingent business interruption, E&O liability, Internet of Things liability, and network security liability.

Evaluating Your Use of Technology

The ways that organizations and their business partners use technology, and the digital assets they hold, is rapidly evolving. How a company uses technology in its operations, products, and services is an important factor in its overall risk profile and an indicator of the likely risks and exposures the company faces.

Understanding those technology-derived risks is critical to a prudent risk management strategy. Marsh's proprietary Technology Risk Discovery tool helps you evaluate your organization's risk from the use of technology in your operations, products, and services, as an initial step in making well-informed decisions around risk management solutions and investments.

Talk to Marsh about assessing the technology risk in your organization and potential solutions to mitigate and insure that risk.

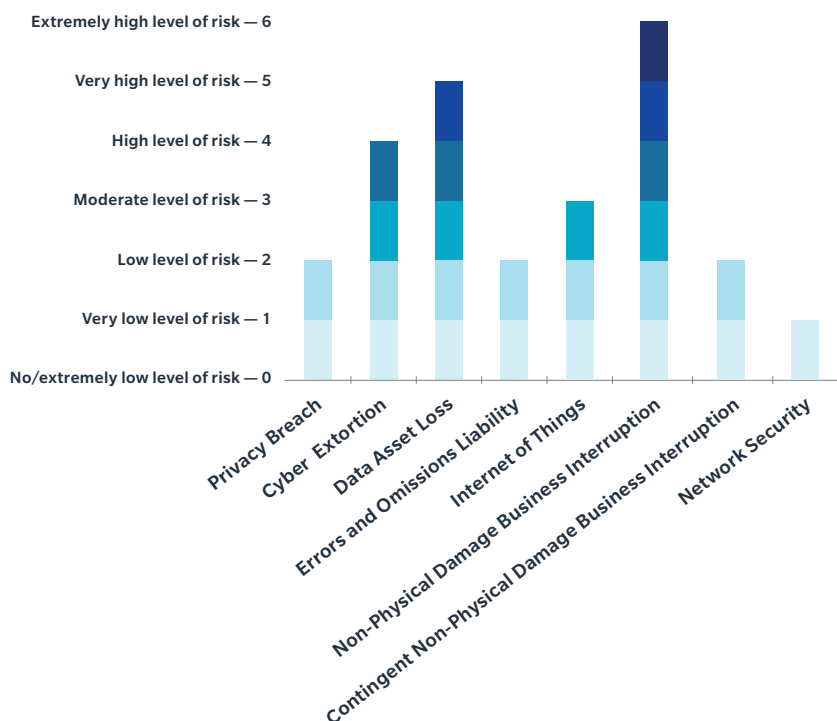

WHO IT'S FOR

- Any company that uses technology in its operations, products, and/or services.
- Organizations considering expanding or realigning their insurance coverages to address new and emerging technology risks.

WHAT YOU GET

- A high-level understanding of technology risks and exposures facing your organization.
- A ranking of technology-derived risks across a range of exposures.
- Useful data to inform risk management decisions and investments.

6,000
CYBER AND E&O CLIENTS.

The tool is not an application for insurance. The ratings provide a general indication of the relative risk for each exposure area, and are intended to be the starting point of a more in-depth risk discussion. As such, they are not precise ratings and may not reflect the true level of risk. Companies should work internally as well as with their risk management advisors to further define risks.

Marsh is one of the Marsh & McLennan Companies, together with Guy Carpenter, Mercer, and Oliver Wyman.
